WISKIND CLEANROOM

Wiskind Group was established in 1978 and is headquartered in Shandong. Wiskind Group is a comprehensive modern private enterprise integrating R&D with production, engineering and technical services, warehousing and processing and capital operation. It has more than 20 branches and offices with more than 2,000 employees. At present, the Wiskind group's business covers five core industrial sectors: clean room enclosure system, R&D, production and engineering services of fabricated building steel products, high-end coated steel plate distribution services, high-precision cold-rolled steel plate manufacturing and integrated housing (modular box-type housing).

Wiskind Cleanroom is a subsidiary established by Wiskind to develop the cleanroom industry market, focusing on the research and development and manufacturing of cleanroom enclosure systems, and the research and development, manufacturing, sales and consulting of medical clean doors and windows and related products Relying on Wiskind's more than 40 years of industry R&D experience and resource integration advantages, it has become a professional clean room enclosure system service provider, an advocate and practitioner of modular clean rooms, and a clean board intelligent producer with the largest production capacity in China.

It has the world's first cleanroom panel production line with independent intellectual property rights and the world's leading automated production equipment for clean medical doors and windows. It has a complete product system and rich product categories, including clean panels, clean medical doors, clean windows and other products. Has passed FM, CE, SGS, ISO9001, ISO14001 certification one after another.

Serving many large-scale system engineering enterprises at home and abroad, and occupying a leading edge in the fields of biomedical, food, electronics and medical industries; we have provided professional clean enclosure solutions to famous companies globally.

R&D CAPABILITIES

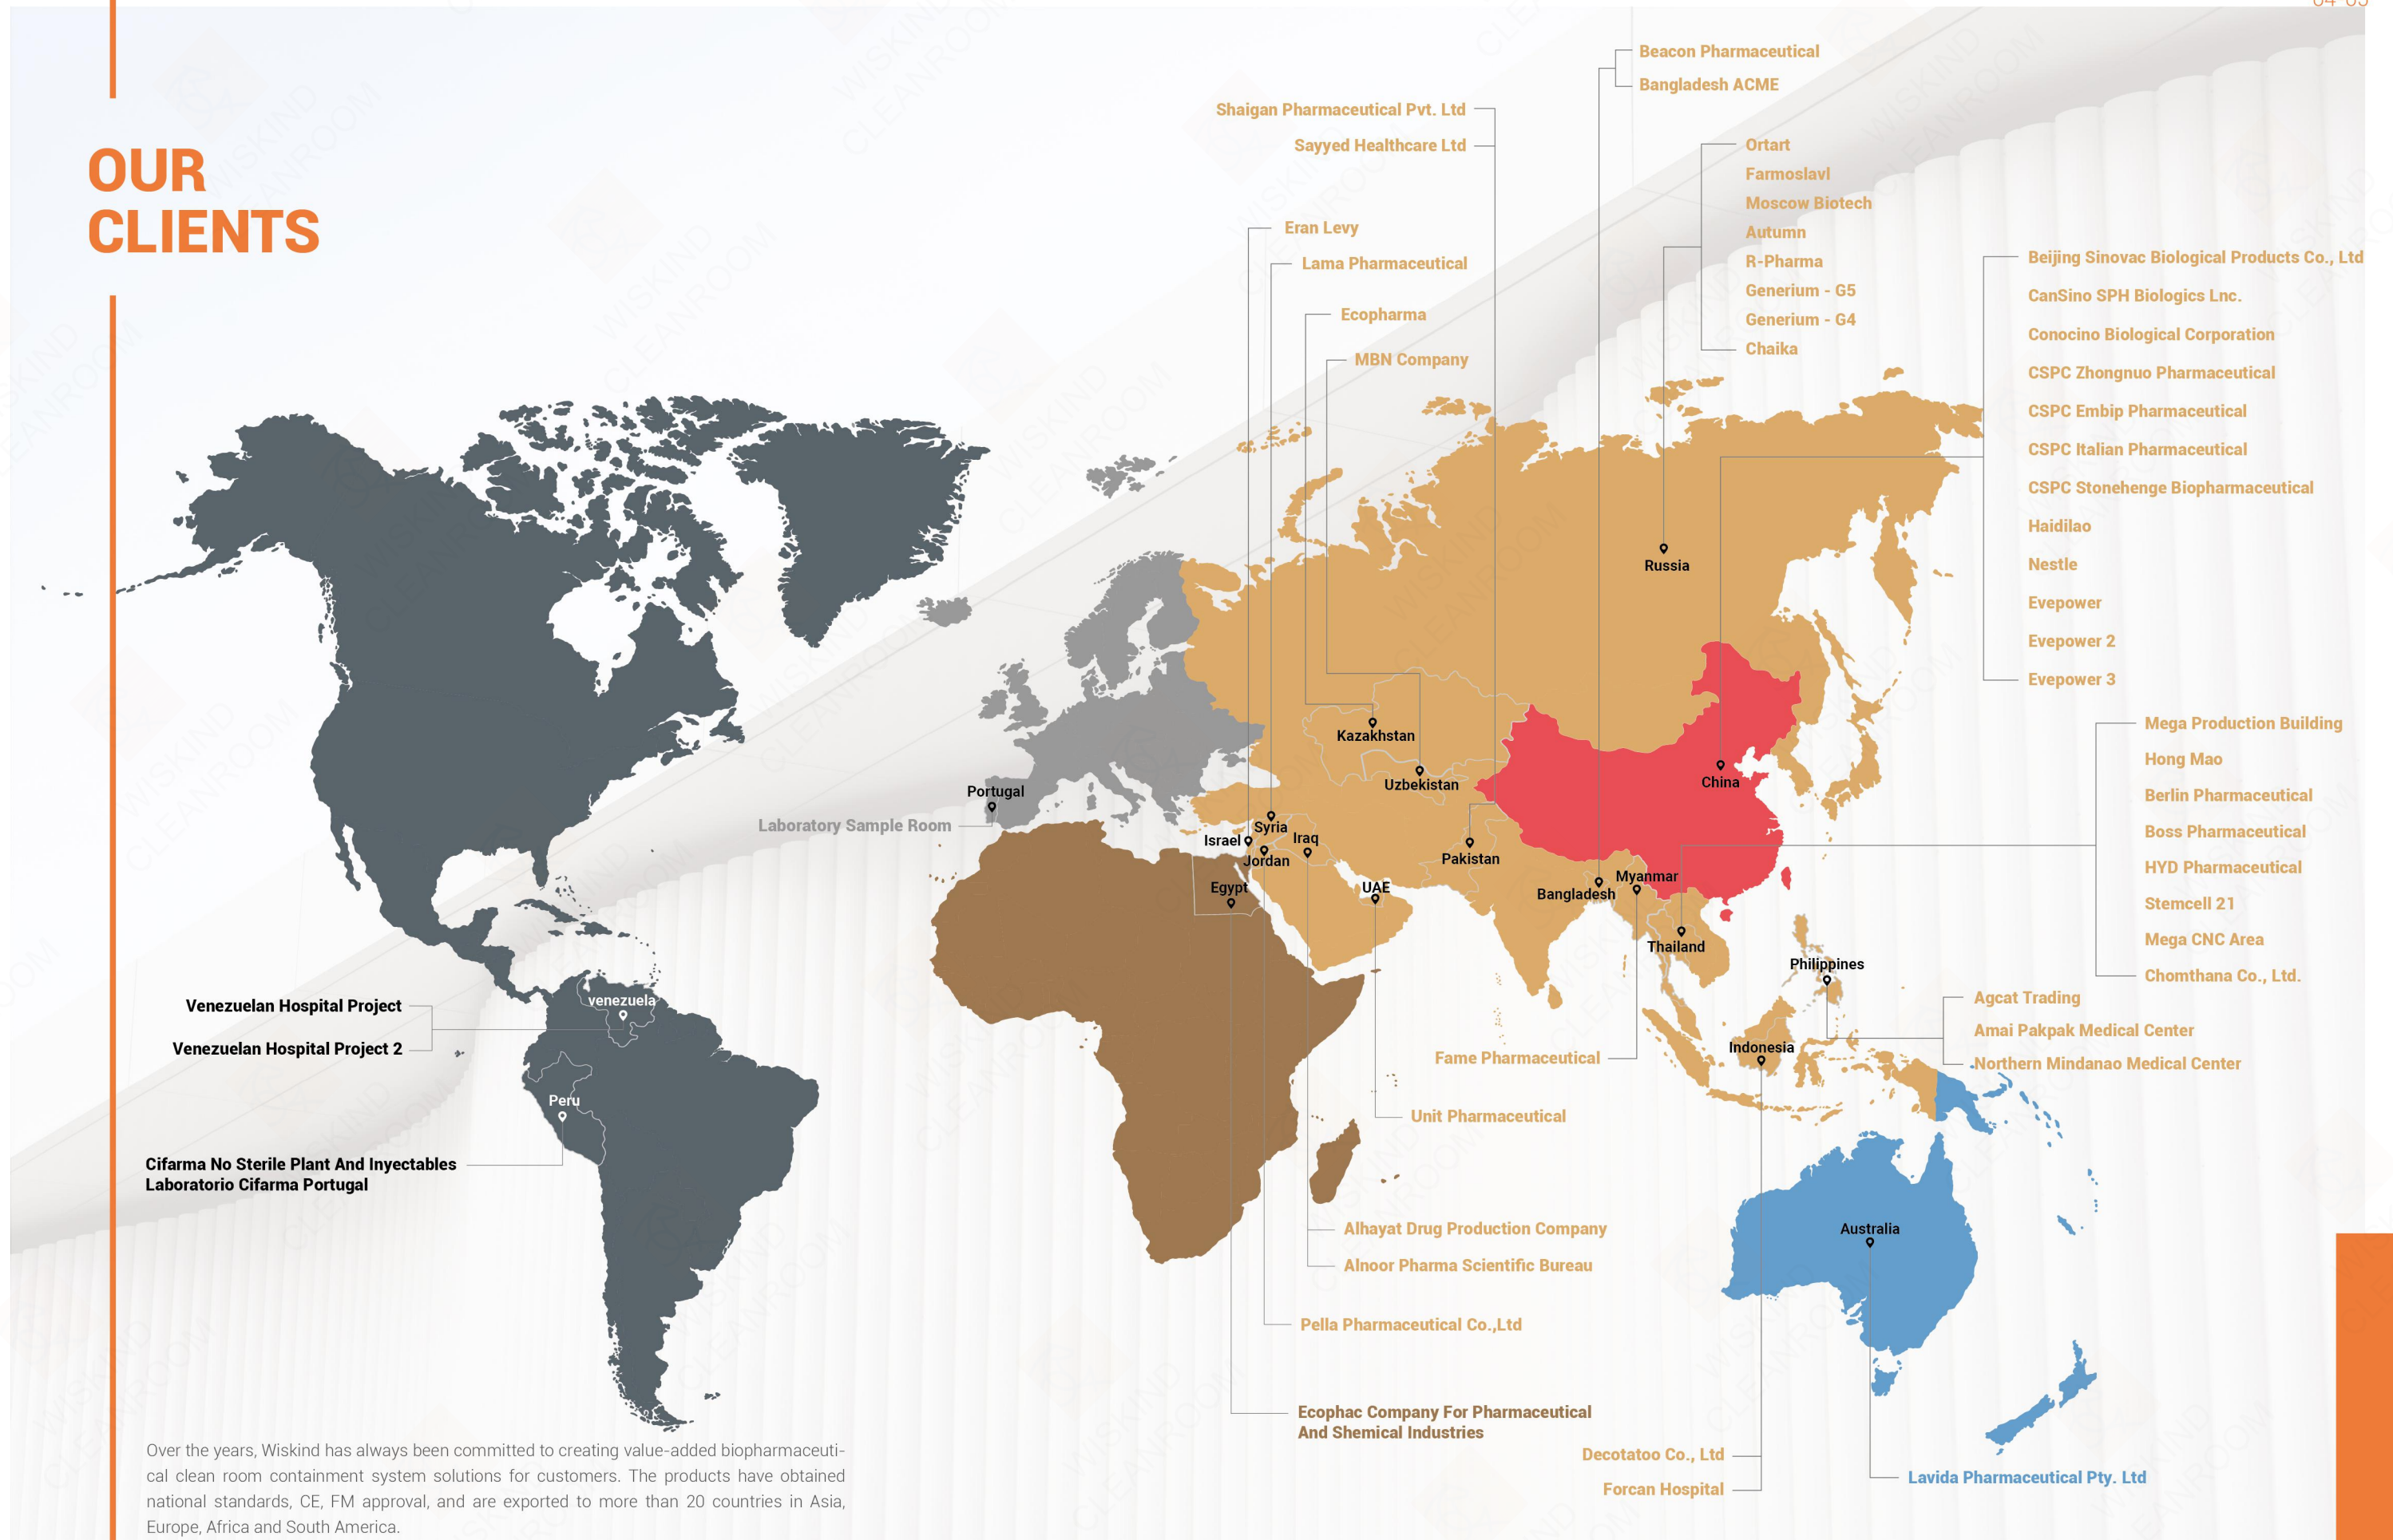

The building of WISKIND Innovation Center consists of a large-scale comprehensive R&D test field and a 4-story scientific research building with a total area of 5000m². It is a comprehensive building integrating R&D experiments and office functions.

It is equipped with more than 40 sets of professional equipment and can realize 32 experiments such as architectural physics and organic chemistry. Structural mechanics, clean space, etc., is one of the most authoritative and complete laboratories in the industry; Establish strategic partnership with famous domestic and foreign enterprises such as Baosteel, Yehui, BlueScope, Maanshan Iron and Steel, BASF. Wiskind has set up joint innovation laboratories with these enterprises.

Provides complete testing and testing conditions for the development of high-quality building products. Obtained professional certification from China Construction Metal Structure Association

OUR CLIENTS

Over the years, Wiskind has always been committed to creating value-added biopharmaceutical clean room containment system solutions for customers. The products have obtained national standards, CE, FM approval, and are exported to more than 20 countries in Asia, Europe, Africa and South America.

CLEANROOM ENCLOSURE SYSTEM

Wiskind continues to explore new materials, new technologies and new solutions to provide customers with overall solutions for the clean room enclosure system in the biomedical industry, covering partition walls, ceiling and doors.window.Profile, etc., we use the spirit of craftsmanship to polish products, the courage to technical innovation, just to better let customers worry, rest assured and glory.

Can provide customized or modular envelope design, intelligent design to complete the facade paper and 3D design scheme, to achieve accurate structure construction Scheme to reduce indoor cracks and leakage risk.

Good at the use of different material characteristics, designed for customers to meet the style needs of the whole factory extension scheme, industrial aesthetics to make the production process environment more friendly.

With the process equipment and user habits for reasonable optimization, to maximize the practical operation of users.

WISKIND CLEANROOM SYSTEM

Cleanroom technology effectively controls particulates, harmful air, bacteria and other pollutants according to client requirements, while meeting the needs for precision, miniaturization, high purity, high quality and high reliability in product processing and experimental research, so it is widely applied in the biomedical, fine chemical, aerospace, food processing and other industries. Wiskind has been leading the industry in cleanroom enclosure system design, material technology and manufacturing processes, and provides professional clients with unique total cleanroom solutions.

Smart Design

Relying on the analysis of massive engineering layout data in the big data center, MasterCard has a clean space intelligent design system. Intelligent layout, intelligent planning of various functions and areas. At the same time, the clean room color matching system software was launched, according to the user's work nature and environmental needs, with different colors of clean boards, clean doors, clean windows, floors, aluminum profiles, glue, etc. * 3D effect, intuitive feeling, high accuracy: dynamic adjustment Convenience and fast response, provide good support for better building of clean room enclosure system'

Smart Delivery

Marketing Center: Communicate the customer's front-line needs to the company's contract performance department at the first time: delivery timeliness, contract signing, bill of materials confirmation, production scheduling, tracking production nodes, etc., to provide more efficient delivery capabilities Technology Center: Technology research and development As a service support, according to different environments and needs, intelligent layout, intelligent planning of various functions and areas'

We hope to deliver such a value to customers: quality and professional services are not only services in the cooperation process, but also the empowerment and delivery of solutions that understand customer needs.

PROFESSIONAL SERVICES

Design

Analyze the overall design plan of the clean room project, understand the actual needs of customers, optimize the design of the clean room enclosure system, and calculate the product usage and cost.

Reach Cooperation

MasterCard's optimized design scheme and layout design drawings have been confirmed by the client or the construction party, and relevant business terms have been agreed upon. The two parties signed a supply agreement, and MasterCard was ready to prepare materials for production.

Manufacturing

The production order is released according to the progress of the customer's clean room project. The factory arranges production according to the order specification, quantity, technical requirements and delivery time, and realizes seamless quality control in the whole process from raw materials to processing and finished product inspection to ensure stable product quality.

Shipping Delivery

Cooperating with large domestic logistics companies, the models are complete, and the transportation network covers the whole country. Standardized packaging and loading procedures ensure safe and efficient delivery of products.

Construction Guidance

Equip the project with professional installation guidance engineers to ensure accurate construction and proper installation, and coordinate to solve unexpected problems at the installation construction site.

Use And Maintain

Equipped with a professional after-sales problem handling center, information registration and filing of completed projects, regular return visits to the usage, and one-to-one efficient handling of problems arising.

COMMITTED
